Foods and nutrients consumption and the risk of gallstone disease: A nested case-control study in Rosario, Argentina

Published On: January 10, 2024 | Pages: 008 - 017

Author(s): Agustina Bertola Compagnucci*, Herman A Perroud, Stella M Batallés and Stella M Pezzotto*

The etiology of Gallstone Disease (GD) is multivariate and it involves genetics and environmental factors. Nutritional exposure is considered the main environmental influence that contributes to gallstone formation. The aim of this study was to assess the association between diet and GD. A nested case-control study based on a previous representative screening of asymp ...

Evaluation of COVID-19 anxiety level and COVID-19 vaccine acceptance of the Turkish citizens during the pandemic period

Published On: January 08, 2024 | Pages: 001 - 007

Author(s): Pelin Yldrm, Cemal Kavasoullar, Cumali Uri, Rabia Klaç and Ersin Akpnar*

Aim: In this work, we try to determine the effect of the coronavirus disease of 2019 (COVID-19) on Turkish citizens' anxiety levels and we try to investigate the COVID-19 vaccine acceptance rate among citizens. Moreover, the aforementioned two statistics are cross-correlated with each other. As final work, the reasons for the objection to the COVID-19 vaccine are obse ...

Upper cervical spine syndrome: A new perspective

Published On: June 24, 2024 | Pages: 018 - 021

Author(s): Rob Sillevis* and Anne Weller Hansen

Headaches are widespread in Western Society; they affect approximately 50% of the adult population in the United States. Headaches can present with a variety of clinical and regional symptoms. Although a headache disorder classification system exists, clinical experience has identified various overlapping causes for headaches. It remains clinically challenging to iden ...
