Use of Oral Gentamicin in Children with Primary Immunodeficiency and Recurrent *Campylobacter coli* Bacteremia: A Case Report

Published On: September 13, 2024 | Pages: 001 - 004

Author(s): Miriam Gendive Martín*, Lizar Aguirre Pascasio, Concepción Salado Marín and Sandra Maeso

Immunosuppressed patients are more at risk of suffering bacteremias due to atypical microorganisms such as Campylobacter coli, which can colonize their intestinal mucosa due to the absence of IgA, the main immunoglobulin of the mucosa and which is not provided with intravenous or subcutaneous immunoglobulin treatment. We have recently had a case of a 5-year-old girl w ...
